The AI-native business system

Perstack makes your operations AI-native by bringing agents that don't break rules into your business processes.
Keep your existing business rules. By delegating process execution to agents, throughput across your business is freed from the constraints of human capacity.

WHY PERSTACK

Agents that don't break rules

Every critical action must pass through a rule engine outside the AI.
It enforces your defined business rules. Actions that fail the check cannot execute.

USE CASES

Built for the work you couldn't automate

Mission-critical work

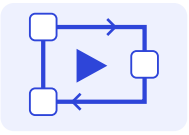

Execute within defined pricing, permissions, and process rules.

e.g. Construction estimates

Fully hands-off operations

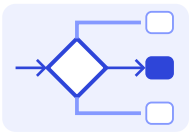

Keep work running without someone operating a screen for every task.

e.g. Continuous knowledge upkeep

Non-routine work

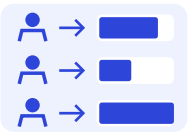

Use documents and past decisions to adapt to each new case.

e.g. Project design & estimates

Personalization

Tailor work to each person's history and needs, in parallel.

e.g. Skills & development plans

AGENT RUNTIME

Features

Agentic Backend

Define business data, rules, and operations to build systems that agents can operate.

Tools & skills

Add tools and specialized capabilities to equip agents for your business.

RAG

Search internal knowledge within access permissions and generate grounded answers with sources.

Long-term memory

Retain business knowledge and past decisions to carry context into future runs.

Code execution

Write and run code for calculations, data processing, and document creation.

Sandbox

Run code and tools safely in an isolated execution environment.

Subagents

Delegate work to specialized agents and carry out multiple tasks in parallel.

Connect the tools you already use

Connect internal tools and external services via REST API / MCP

Gmail · Google Drive · Notion · Dropbox · Zoom · HubSpot · Asana · Jira · GitHub · Stripe

Examples shown. External access goes through a gateway, with immutable audit records.

Triggers: chat, email, web forms, external events, and schedules

PRICING

Each monthly plan includes platform features and AI usage within its allowance.

Starter	Pro	Pro+
$300 /month	$1,500 /month	$6,000 /month
Generous everyday capacity	5× Starter	20× Starter

From prototype to production in days

Our FDE team supports your rollout. Implementation is quoted separately.
